American Energy Stories from Michigan

In July 2024, General Motors received a \$500 million grant, funded by the clean energy plan, to convert its Grand River Plant in Lansing for EV manufacturing. The grant and an additional \$900 million investment by GM will retool production lines at the facility for EV production. The conversion allows the facility to retain 650 workers represented by United Auto Workers Local 652 and add 50 additional jobs at the factory.

The Biden-Harris Administration announced a \$1.52 billion loan guarantee to Holtec Palisades for the restoration and restart of an 800-MW nuclear generating station in Michigan. This marks the first recommissioning of a nuclear power plant in U.S. history, aiming to generate carbon-free energy and create over 2,000 clean energy union jobs.
