American Energy Stories from New Mexico

Sunvapor, Inc. and Southeast New Mexico College (SENMC) have launched the first solar-powered desalination plant at a facility about 10 miles southeast of Carlsbad, the college announced. The pilot project aims to make use of the salty wastewater, called “produced water,” generated during oil extraction.

Tri-State Generation and Transmission Association, a major rural cooperative utility in the U.S., is acquiring its first large-scale solar power plants as part of its shift away from coal. The cooperative, which serves 1 million customers across Colorado, New Mexico, Wyoming, and Nebraska, aims to deliver 50% renewable electricity by the end of 2025.
