American Energy Stories from New York

Invenergy's Orangeville project is a 94 MW wind and storage facility located in Wyoming County, New York that came online in 2014. In 2021, Invenergy co-located a 20 MW energy storage facility nearby which uses battery technology to store and provide electricity to 38,000 New York households. This project helps provide reliable power during extreme weather events to help keep the lights on in Wyoming County and provides low-cost, dispatchable electricity to homeowners and businesses.

The LPO announced it closed a loan guarantee of up to \$1.66 billion for Plug Power, a manufacturer of fuel cells and hydrogen electrolyzers. The guarantee is meant to help the company attract financing to build up to six facilities that will produce hydrogen with low or zero carbon emissions using its electrolyzers.
