American Energy Stories from North Dakota

An unwanted byproduct of North Dakota's oil field could be the key to unlocking a new industry in the state within the next few years. An international company is proposing to begin extracting lithium, a key component of batteries produced for smartphones and other technology, from produced water by the end of 2027. It's one of at least four similar projects in development in the state.

Through a CPRG Implementation Grant, the Spirit Lake Tribe will increase the use of renewable energy, improve climate resiliency of Tribal housing, support clean transportation and electric vehicle infrastructure, and expand waste-prevention and recycling practices in the Tribal community.
