American Energy Stories from Wisconsin

Tech company Epic Systems uses one of the largest geothermal networks in the world to heat and cool its office buildings at the Verona, Wisconsin campus. Epic, which houses the medical records for 325 million patients, has been continually expanding the system with additional boreholes since the project start in 2006.

The Menasha School District will be home to the state's second net-zero school. In planning, the district mapped out a facility that completely eliminates reliance on oil and gas, and instead utilizes geothermal heating systems, heat pumps, and a 1.15 MW solar array consisting of over 2,700 panels. The new clean energy system is projected to save $140,000 annually.

All data is from the Clean Economy Tracker. Manufacturing data is as of August 2026 and electric power data is as of June 2026. Find out more at https://cleaneconomytracker.org
